**Features:**
- CMOS Technology
- +/-15 Volt Output Driver Supply Voltage
- Drives Segment or Active Matrix Displays
- 4 Level Gray Scale
- 25MHz Clock Frequency
- Bi-Directional Data Transfer
- Selectable Register Length
- 2.7V to 5.5V Logic Supply Voltage
- Cascadable

**General Description**

The MXEI1480 is a selectable 400, or 480 bit long 2-bit wide serial-input parallel-output digital shift register with level conversion on each parallel output which converts the 2 digital bits into VPOS, VSS, or VNEG analog output voltages. An 8-bit input bus simultaneously inputs 4 groups of 2 bits each.

The MXEI1480 consists of a selectable length Bi-Directional Input Register, Transfer Latch, and 480 bit Level Shifter / Output Driver. Each "OUT" pin is switched to one of [VSS, VPOS, VNEG] according to the D0...D7 logic levels clocked into the MXEI1480, modified by the OE pin.

The MXEI1480 is designed to operate over a temperature range of -40°C to +85°C, and is available as Gold Bumped Die in Waffle Pack, and Gold Bumped in Wafer Form.
